

Environmental Services

PDC offers environmental management and restoration services by a trained and experienced staff. We work with our clients to determine feasible, cost effective remediation methods to achieve site-specific restoration goals. We develop cleanup criteria consistent with regulatory requirements, minimize risk, and support site restoration and closure.

Our environmental staff has extensive experience in Alaska with contaminated site cleanup, solid waste management, environmental permitting, fuel storage management, remedial design and implementation, focused feasibility studies, removal and disposal actions, long term monitoring, and compliance with environmental Applicable Regulations and Appropriate Requirements (ARARs).

PDC's Environmental Services Include:

- Waste Management, Removal Actions, and Long Term Monitoring
- Site Assessment, Investigation, and Recommendations
- Focused Remedial Technology Design and Implementation
- Regulatory Permitting and Compliance Strategies
- Operations and Maintenance of Remedial Technology and Systems
- Regulatory Support, Agency Interface and Negotiations
